

das Kummet

JULY 1977

THE TIDEWATER CHAPTER {BEY EM VEY CORPORATION} OF THE BMW CAR CLUB OF AMERICA, INC., IS AN INDEPENDENT GROUP OF BMW OWNERS AND IS NOT ASSO-CIATED WITH THE MANUFACTURER, IMPORTER, OR DEALERS OF BMW AUTOMOBILES. MEETINGS ARE HELD AT THE JANAF BRANCH OF THE NORFOLK PUBLIC LIBRARY ON THE THIRD TUESDAY OF EVERY MONTH UNLESS OTHERWISE NOTED IN "DAS KUMMET." THE MEETING TIME IS 8:00 PM.

"DAS KUMMET" IS A MONTHLY PUBLICATION OF THE TIDEWATER CHAPTER {BEY EM VEY CORPORATION) OF THE BMW CAR CLUB OF AMERICA, INC., AND IS PROVIDED BY AND FOR THE MEMBERS OF THE BMW CAR CLUB OF AMERICA ONLY. OPINIONS AND SUGGESTIONS EXPRESSED IN REGARD TO TECHNICAL MATTERS ARE THOSE OF THE AUTHORS AND NO AUTHENTICATION IS IMPLIED BY THE EDITORS OR PUBLISHERS. MODIFICATIONS WITHIN THE WARRANTY PERIOD MAY VOID THE WAR-RANTY.

MATERIAL APPEARING IN "DAS KUMMET" MAY BE REPRINTED WITHOUT PERMISSION PROVIDED PROPER CREDIT IS GIVEN.

PRESIDENT'S COLUMN

I'm writing this on the eve of the "Bride and Groom IV;" I hope it goes well.

Last month was kind of sparse on activities other than the B&G and a well laid out and well attended TECH SESSION at DAVE PRITCHARD'S. Memorial Day weekend we had our first DRIVE OUT of the year and a GOOD START it was. We began the day with a picic at Sleepy Hole Park outside Portsmouth, then we drove up to CHIPPOKES PLANTATION Just south of SURREY for a tour of the OLD but still operating layout. The tour was INTERESTING, but marred by the HEAT and some of the most AGGRESSIVE mayflies I've ever encountered. From Chippokes we journeyed to the JAMESTOWN ferryboat LANDING near Surrey and rode the ferry to Jamestown - a REFRESHING cap to the day. Once in Jamestown we toured the COLONIAL Parkway down to Williamsburg and on home from there. All in

all it was a very enjoyable TRIP and we're looking forward to the NEXT Drive Out.

JULY will be a BUSY month with Eddic A Month of the 10th, the TECH SESSION on the 17th, and the CHAPTER CONGRESS on the 23rd & 24th. We're trying something new at the Tech Session - a SELL/SWAP MEET in which you can bring ALL those old or USELESS parts you have lying around, SPREAD 'em out on a blanket, and sell or swap with others WHO DO the same. So if you're looking to GET RID of some STUFF (Auto re-

lated), bring it to the JULY TECH SESSION — it chould be INTERESTING.

YOU ARE ALL INVITED to attend the CHAPTER CONGRESS BUFFET BANQUET on Saturday, July 23rd at the Sheraton/Military Circle. Cost is \$12.00 per person which INCLUDES HORS D'OEUVRES, tax and gratuity. A CASH bar will OPEN at 6PM and the BUFFET will begin at 7PM. This is a GOOD CHANCE to meet GORDON MEMENICA, ROBERT P. BROOKS, a COUPLE of NATIONAL OFFICERS, plus people from all Chapters in the ATLANTIC ZONE. NOTE that the \$12.00 must be paid IN ADVANCE so we can get an accurate HEAD count. See me for your advance TICKETS — LAST CHANCE to BUY will be at the Club Meeting on the 19th!

MARK your calendar NOW for our PICNIC at Newport News Park on August 7th. Fur-

ther details in the ARTICLE.

TAKE CARE.

Rusty

COME TO THE BANQUET !!!!!! """ !!!!!! MEET YOUR NATIONAL OFFICERS IT'S VERY IMPORTANT TO GET YOUR \$12.00 TO RUSTY BY THE MEETING ON THE 19TH

SYNTHETIC OILS - PRO (Letter to BMWCCA Chapter Newsletter Editors from Bob Brown, President, Iowa Chapter)

I've recently become aware of a letter being circulated by a Mr. Wil Hart, Vice President of Research and Development, Kendall Refining Company. The letter, entitled "Synthetic Oils: Fact or Fancy", has shown up in a few CCA newsletters. As a proponent of the

"equal time law" allow me to challenge a few of Mr. Hart's opinions.

As President of the Iowa Chapter I'm called on quite often by members to recommend, evaluate, and justify the utilization of various new products. Quality lubricants are one particular area of great interest to all BMW owners. My opinion was always - "Castrol 20W-50 in the summer; 10W-40 in the winter". Wrong! I've since found a lubricant superior to any conventional petroleum oil on the market today. A quality 100% synthetic has proven to be the answer to all my lubrication needs.

Now, being of "sound" mind, I've always been skeptical of the many automotive "gimmicks" sold today. That same skepticism lead me to spend several hours of personal investigation into the merits of synthetic oils. After reviewing all the major producers of automotive synthetic lubricants I decided to try Amsoil because it looked like the best. I've not been disappointed. I'm thoroughly convinced that a quality synthetic such as Amsoil is far superior to any petroleum lubricant available today. What's equally important is that my opinion is supported by independent professional tests as well as literally

thousands of individual car owners, BMWCCA members included.

After reading Mr. Hart's letter, it seemed that many of his assertions either failed to distinguish between 100% quality synthetic oil and inferior brands, or simply ran counter to my own experiences. For example, Mr. Hart wrote that there is a lack of "development sophistication" with synthetics. Not so; performance additive packages used in conjunction with ester base oils are well proven. He also said that seal materials used in current engine designs are not compatible with synthetic based engine oils. Not so; quality synthetic products are specifically designed to be compatible with seal materials used in industrial and automotive applications. Furthermore, Mr. Hart claimed that "synthetic bases lack the viscosity required for satisfactory lubrication at normal design clearances, operating temperatures and other conditions". Wrong again; a quality synthetic's low coefficient of friction lubricates better than a petroleum, thus reducing the engine's operating temperature. All of these factors contribute to reduced engine wear. And lastly, Mr. Hart stated that "the inherent high cost of synthetics is an obvious problem". Again not so; the proven gas mileage savings along with proven extended drain intervals more than offset the initial higher cost.

The benefits are more numerous but I've made my point. Let's not forget, too, that America needs non-petroleum lubricants to reduce the rapidly dwindling supply of

petroleum.

CLUB PICNIC AT NEWPORT NEWS PARK

On Sunday, August 7th, we will have our first club picnic EVER. We have chosen Newport News City Park as our site so you Peninsula members better be there! We will reserve a shelter and there are grills so bring your hamburgers and hotdogs. Also, bring the whole fandamily—this is a family event. We don't have anything special planned - just a lazy, quiet afternoon with the wife & kids. By the way, if you plan to bring beer or wine, bring a nondescript cup or glass to put it in!

Newport News City Park is off Rt. 143 just north of Fort Eustis.

We plan to begin around noon - see you there.

SELL/SWAP TECH SESSION

JULY 17th @ Bob Mattice's in Virginia Beach. To get to Bob's, go south on Birdneck Road from the Expressway, cross Va. Beach Blvd. and go for 3 miles to a yellow Cape Cod house on the right. If you get to Gen. Booth Blvd., you've GONE TOO FAR!! The address is 839 S. Birdneck Rd. Bring \$2.00 per car for refreshments.

TECH TIPS AND ETC.

WORN HOSE - Six cylinder owners should check to see that the air conditioner compressor input and/or discharge hoses do not come into contact with the coolant hose which connects the bottom of the radiator to the thermostat housing. Contact between these hoses is almost inevitable because of the cramped space and will cause a small hole to be worn in the radiator hose in less than a year's time. Replace the hose if it's worn and install some sort of chafe guard on the radiator hose — I use a nylon cable at the point of contact.

PAINT - Norfolk Paint Co. has an interesting brand of paint in stock — it's called Ferrothane. According to the label, it is a plastic base paint with built in rust inhibitors and it needs no primer. The manufacture claims superior impact resistance to conventional paints and a reasonable heat resistance. So far I've used this paint on wheels, rocker panels, and an air filter assembly with quite satisfactory results.

LOOSE BOLTS - Periodically check the tightness (supposedly 69ft-lbs) of the two 19mm bolts that attach the brake caliper to each front strut. They can and do come loose every now and then — complete with much commotion, degradation of braking capacity, and nasty gouges in alloy wheels.

SUPER SPRITZER - Since 1970 (year of initial ownership), I've had problems with clogged windshield washer nozzles on my 4 cyl. BMWs. Generally some small piece of crud will get into the system & not quite make it out again. What a p.i.t.a!

MOD 1 for this problem consisted of squeezing the flattened ends of the nozzles back to a nearly circular orifice. Not much better. MOD 2 involved drilling out the ends of the nozzles to a larger diameter. I broke two drill bits and gave up that idea. MOD 3 was simply cutting off the ends of the nozzles until a point was reached where the internal

diamater was larger and did not contain a drill bit. MOD 3 seemed to be the answer - until the day of the cataclysmicgawdawfulclog. What it was

I still don't know, but the nozzles were solidly retired.

MOD 4 was the purchase (\$9 or so) and installation of two shiny new special-ordered BMW nozzles. Also installed was a VW type inline fuel filter and a second washer pump in parallel with the first. (The second pump was necessary to overcome the inherent pressure drop caused by the filter.) At last the washers work — all the time. It's been a year and a half without a clog or misfire. The best part, though, is the quarter-mile range!

QUICK & DIRTIES

The rigors of middle age (my cars' middle ages, that is) combined with acute resistance to purchase expensive parts have prompted quick & dirty fixes now and then. A few are listed below.

- 1. Heavy duty aluminum foil glued with GE Silicon Seal to the crudded over reflector surfaces of parking and tail light lenses is the answer. Just check the prices on new reflectors if you have doubts. (This method is also a nifty way to rejuvenate the reflective surfaces of old toaster ovens.)
- 2. Another good use for GE Silicon Seal (licorice flavor) is to seal & cleverly disguise any cracks or tears in the BMW dashboard & console. This good stuff is also a terrific muffler patcher.
- 3. Armorall does prevent rubber and vinyl rot, but what do you do if the evil ravages of rot have already taken hold? Armorall rubbed into window moldings using a Dobie brand Teflon scouring pad will cut through all kinds of rot, filth & residue. The results will be a super slick surface. A Dobie is also just about the best gadget around for cleaning splattered bugs off windshields.
- 4. Spray type rug cleaners (Glory, Woolite, etc.) do a fairly decent job on BMW carpets if you're willing to rub super soiled spots with a brush. All yours for about \$2.00.
- 5. VW black plastic lug nut covers do a superb job of hiding plain-Jane or rusted chrome lug nuts. Covers for the Bug (type III) are for 19mm lugs and Rabbit type covers are for 17mm lugs. At 45¢ each, they're not cheap; but they'll never rust. That's more than can be said for any chrome lug nut I've ever seen.
- 6. The last time you replaced the water pump on your 4 cyl. you did not (I'll wager) replace the copper sealing washers used under the bolts.

 THE BOOK says to replace them, but let's face it, making a special order them is silly. The copper washers in a VW oil change kit will do the job. These same washers do an excellent job of sealing the small and leak-prone bolts used to secure the distributor flange to the back of the cylinder head.

VARIOUS AND SUNDRIES

PHOENIX OR PIG??

Article by Scott Mexic from the <u>COONASS</u> * <u>COURIER</u>, Bayou Chapter (Ed. Note: where * "Ed. Note" appears in this article, the * Ed. in question is Gwen Goodrich, Editor * of the <u>COONASS</u> COURIER.)

I guess I should call my car the *Guinea Pig instead of the Phoenix for I *have tried many different products on *it. I have found some of these products *very satisfactory, and some inferior to *the standard product that they replaced. *

**BRAKE PADS on my '73 2002 twrned out to be very poor substitutes for my Ferodo brake pads. Karzundpartz promotes these pads (*RPG-500 Dual Friction Disc Brake pads that list for \$18.95) as outstanding

* *

Ferodos, which I did not throw out (luckily!).

The next item that I have tested on my car is the LUCAS SPORTS COIL. This ignition roil is one of the finest ignition coils I have run across and seems to produce a higher sutput then even the Bosch Blue. It helped cure my problem with plugs fouling in city traffic (remember, big Webers do not like to drive in town.). I had been using the Bosch Blue Coil with NGK BP6-ES spark plugs and if I got stuck in traffic with the air conditioning on for more than 10 minutes, my car would begin to spit and buck. Now that I have installed the Licas coil I do not have as severe a problem. I must admit that since I installed it, I did get one set of fouled plugs, but that was due to a one hour and 45 minute traffic jam in the rain when it was almost 90 degrees. I would challenge any coil to improve on the Lucas. I purchased mine from Union Auto Supply on Howard Ave. for under \$15.00.

One note — with the Lucas coil you do have to chamge the kingpin wire from the coil to the distributor. The Lucas coil has a screw-in fit instead of the standard press fit. This is a very simple operation, taking only about 10 minutes. One other note — the Lucas coil, like the Bosch Blue, is a 12 volt coil. On the older (pre '74) cars you cam usually see the resistor and take your power from just before the resistor. On the newer cars, the entire coil wire is a resistive wire. In this case, you must find another source for your power supply to the coil. The incorrect voltage can cause it to fail.

About 2,000 miles ago I replaced my standard Castrol 80/90 gear oil with SYNTHOIL MAGNUM 100 GEAR LUBRICANT. This product carries a SAE rating of 80W-90. This is a diester oil. I purchased this lubricant from Aland of New York (see the April ROUNDEL for their address). This lubricant claims that it can give longer gear life, better fuel economy, and smoother shifts. I have found that it increases the smoothness of the shifter, but I have not noticed any change in my fuel economy, even on a recent trip to Atlanta. I cannot say anything about its effect on gear life, since I have used it for such a short time, but since the shifts are smoother, I assume that it will help extend gear life. ince it is a synthetic (a di-ester) it should be able to conduct heat better and live better under adverse conditions than a standard transmission oil.
